Agricultural Society Authorize Expenditure For Stampede Imp'ts

A meeting of directors of Oyen Agricultural Society was held last Saturday afternoon at 2 o'clock.

Changes in the prize list, recommended by a revision committee, were approved.

An initial expenditure of four hundred dollars, for improvements to fair grounds for the stampede, was authorized.

The following committees were appointed: Special prizes, G. S. Peck, A. Gibson, J. P. Rorabeck and A. M. McQuarrie; Grants, R. Cates, S. H. Abbott, J. P. Rorabeck and A. M. McQuarrie; Grounds, A. M. McQuarrie, A. Gibson, F. S. McNeen and S. H. Abbott; Sports, S. H. Abbott, A. M. McQuarrie, J. J. Kelly, Thos. Lees, J. P. Rorabeck, A. Gibson and J. P. Kerr.

The following were appointed Directors in charge: Horses, A. McQuarrie, J. P. Kerr and E. H. Davies; Cattle, Sheep and Swine, C. G. Peterson, J. O. Bale and John Othen; Hall Exhibits, J. J. Kelly and Thos. Lees; Farm Produce, Roots, and Vegetables, F. G. Austin and Thos. Lees; Dairy Produce, Domestic Products, Canned Fruits and Vegetables, Native Grown Fresh Fruits, Mrs. C. S. Wright and R. E. Gillespie; Plants, Mrs. C. P. Snyder; Baking and Cooking, Mrs. R. E. Gillespie, Mrs. H. M. Rogan, and Mrs. Thos. Lees; Ladies Work, Mrs. C. S. Wright, Mrs. J. C. Jule and R. E. Gillespie. (Continued on page 2.)

LEGAL NOTICE

GOVERNMENT LIQUOR CONTROL ACT OF ALBERTA

Application For Beer License

PUBLIC NOTICE is hereby given that the undersigned intends applying to the Alberta Liquor Control Board for a license to sell beer by the glass or open bottle, for consumption in conformity with the provisions of the Government Liquor Control Act of Alberta, and regulations made thereunder, with respect to the following premises, known as:-

The Sibbald Hotel, Main Street, Sibbald, Alberta, Lots 1 and 2, Block 2, Plan No. A.V. 5088. Location of beer sales' room; ground floor, facing south west corner of building.

Dated at Oyen, Alberta, this 9th, day of April, 1930, A.D.
WILLIAM MALONEY, Applicant.

Fuego Head Office Now At Oyen

According to reports from the Fuego well, the flow of oil has been steadily increasing. A twelve hour production test made last week, showed that oil was coming out at the rate of 68 barrels a day. No water has shown in the well since Saturday and oil has risen in the hole to a height of 2700 feet.

The flow of the last few days, samples of which have been sent to Calgary for analysis, is of a light amber color, and is believed to be of richer lubrication qualities.

At a shareholders meeting held in Toronto last Thursday, bylaws authorizing the re-capitalization of the company to \$3,000,000, and the moving of the head office of the company from Toronto, Ont., to Oyen, were confirmed and adopted.

All stock issued prior to April 17, will be split five to one.

Don't miss the half-price sale of quick drying lacquers at the Kerr Hardware.

General Merchant - Oyen

EMIGRATION TO CANADA SHOWS BIG INCREASE

London, Eng.—Emigration to Canada has increased more than 25 per cent. during the past four years, although emigration to dominions generally has shown a considerable falling off since 1920. It was disclosed in the House of Commons.

Hon. W. R. Smith, parliamentary secretary of the Board of Trade, in reply to questions asked by Mr. Bennett, stated that emigration to Canada had increased year by year, namely from 46,632 in 1920, to 65,558 in 1925, while Board of Trade figures showed the aggregate emigration to Canada, Australia, New Zealand and Australia had decreased from about 119,000 in 1920 to about 94,000 in 1925.

The colonial office also was questioned with regard to Dominion emigration. Dr. Drummond Young, parliamentary under-secretary, stating he would circulate detailed figures later. He gave the same figures as Mr. Smith for Dominion emigration generally, stating emigration to Canada showed an annual increase.

Twelve Rescued From Sea

Voluntary Missionary and Family Stranded in Motor Boat

Panama City, Stranded for nine days in a motor launch in the Caribbean Sea east of Colon, J. W. Miller, of Jacksonville, Fla., and his wife and nine children and a negro man were rescued by the U.S. gunboat "Patia" when their doom from starvation and exposure was imminent.

Miller and his family, the youngest of whom were seven months old, started out from Boca del Toro, Panama, for Colon, in a motor launch. Six days later they ran out of fuel while only a short distance from their objective.

For days after that he watched for craft which might help him to get to Colon. Twice he signalled passing boats with a small flag he had with him, but was unable to make himself seen. The "Patia" sighted him about three miles off Colon and brought the party to land. The Millers are a family of "voluntary missionaries." They left America in June, 1923, for a cruise through the West Indies, and on the first of their trip they founded the mission "Church of God" on the Isle of Pines, Cuba.

Keeping Up Record

World's Champion Egg-Laying Hen Still Leads in Production

Stanton, N. Y.—The world's champion egg-laying hen, is doing very well in her second year. When this Barred Rock pullet, who leads the University of Massachusetts, completed her first year of egg production, during which she laid 308 eggs, she did not meet her record. She laid another 10 eggs last September.

Towards the end of December she started her business, and in January, that month, in January, February and March she worked steadily and produced as many eggs as the average Saskatchewan hen does in a year.

France Protects Auto Industry

Paris—From ten to 60 per cent. Higher tariffs on United States automobiles became effective under a bill passed by the chamber of deputies and the senate. The government contended the law was intended merely to simplify the customs routine by changing from ad valorem to specific duties. Arguments in parliament were based upon the theory that the French auto industry needs more protection.

Will Repeal Clause

London, Eng.—The House of Commons has voted 184 to 10, to repeal in the Army Estimates bill the clause abolishing the death penalty for cowardice and desertion. This was the answer of the Lower House to the action of the House of Lords in deferring from the clause going away with the penalty.

Presentation For Byrd

Washington, Conn.—An sword wrought in gold, silver and enamel to commemorate Rear-Admiral Richard E. Byrd's achievements as a geographer, flyer and seaman will be produced here for the State of Virginia. It will be presented by the state to Admiral Byrd upon his return from the South Polar region.

A new electrical device can be used to seal broken blood vessels.

Predicts Early Election

May Be Held This Year, Says Hon. R. B. Bennett

Calgary.—All appearances point to the calling of a Dominion election before the end of the present year," asserted Hon. R. B. Bennett, on his return to Calgary following adjournment of the Federal House for the Easter recess.

"I am sure that one of the government supporters in Edmonton has fixed the date on which an appeal will be made to the people, but I doubt if the Prime Minister himself has yet determined that point.

"The budget will probably be delivered shortly after the Easter recess," Mr. Bennett continued, "and there is much conjecture as to what it will contain. Undoubtedly prompt action has been made to the importation of Quebec that a tariff will be imposed on fruits and vegetables, and the iron and steel producers have been assured that their industry will receive protection under the new tariff."

"The action of Australia in imposing a surtax to practically prohibit the importation of many commodities is justified by the Australian Government as well as Canadian Government imposed a dumping duty of six cents per pound on imports of steel per pound on these importations. The whole problem of Australia trade is engaging the attention of the government at the present time."

Tariff Commissioner Retires

Fellow-Workers Of J. A. Russell Hold Banquet To His Honor

Ottawa, Ont.—Warm appreciation of the faithful and efficient service which he has given to the Dominion over a period of more than half a century was voiced at a banquet given in honor of James A. Russell, retiring commissioner of tariffs for the department of finance.

The event was signalled by the attendance of friends and fellow-workers of Mr. Russell from the department of finance, the department of national revenue, the tariff advisory board and the department of external affairs, who gathered at the Royal Ottawa Golf Club to do honor to their colleague.

After serving the country for fifty-three years, during which time he was associated with six finance ministers, Mr. Russell now retires on pension under the seventy-five age provision.

Trouble In British Textile Mills Growing

Workers Fighting Wage Reduction Employers Deem Necessary

London, Eng.—May be the prospects of a long continuance of work in the woolen and textile industries seem to be growing and it is now being predicted that the employment in the country must face a long and bitter struggle between the men and women who will not accept wage reductions and the employers who are acting on the report of Lord McMillan, deem such reductions necessary to the continued existence of the industry.

Today the General Trades Union congress appealed to its affiliated trade union for financial assistance for the Yorkshire workers. The general council itself held the list with a contribution of five hundred pounds, or about \$2,325.

Plans Return Next Year

Kaye Don Faces Many Difficulties In Attempt To Run Motor

New York.—Kaye Don's first attempt to smash the world's automobile speed mark on the sands of Daytona Beach is over but the dapper little Englishman with the bristly blonde mustache will be back again for another go at it next September. It has been anything but a pleasant expedition for the debonair king of Britain's amateur tracks who set out like a schoolboy on a holiday two months ago to crack Sir Henry Seagrave's mark of 231 miles an hour in the massive Blue Bull built for him by the Sunbeam Motors of England. Twenty-two times Don battled a set of coughing motors and he was usually rough. Daytona sands without coming closer to the record than 188 miles an hour.

Thousand Acres Sown

Lethbridge, Alberta.—O. B. Lassier has completed sowing 1,000 acres of wheat in the Bow Island district where the Bow Island district have finished wheat seeding. The recent rainstorm is the cause of much jubilation by these farmers.

Canadians Well Informed

Are Acquainted With Public Affairs Says Lord Willington

Vancouver.—The difficulties of a governor-general who is being constantly asked to deliver addresses and yet is surrounded by limitations in what he may say, were good-humoredly referred to by His Excellency Lord Willington in addressing a luncheon of service clubs here.

Speaking of the work of service clubs and of the opportunity they offered for the study of public affairs, Lord Willington expressed his opinion "that the citizens of Canada are perhaps better informed on public affairs than citizens of any other country. I wish that in my country we had more of these organizations so that the citizens of my country would know more of empire affairs than they do now."

To Cut Grain Acreage

Special Survey Discloses Substantial Reductions In North Dakota

Washington, D.C.—Governor George F. Schuler, of North Dakota, and John L. Coulter, chief economist of the tariff commission, told Chairman Alexander Legge that substantial reductions in both hard and soft spring wheat acreages may be expected in North Dakota and neighboring areas covered by a special survey made by Coulter.

The eastern section of North Dakota, the chairman said, is expected to reduce its acreage of durum wheat more than 15 per cent. forecast by the Department of Agriculture. The reduction in spring wheat in the western section will be less, but of considerable importance.

MANY INJURED DURING SERIOUS RIOT IN INDIA

Calcutta, India.—Nineteen persons were injured in heavy fighting between Nationalists and police in the Chowpura 8th quarter of Calcutta. Train cars were burned in both Calcutta and Bombay and armored cars were used to clear the city when students and carter joined in the attempt to stop vehicular traffic by obstructing roadways and train-lines.

Six European officers were among the injured at Calcutta. A European woman cycling in the district, was forced to dismount and abandon her machine when she was struck by the crowd. She received nasty gashes. Ten Khalsias were injured.

There were unconfirmed reports of firing in North Calcutta. Armed police were on duty throughout the affected area and armored cars were active.

Seven British officials were injured by the time the situation was brought under control. Two members of a South Calcutta mob were injured when a European police sergeant opened fire to save an injured Indian officer. Meanwhile the Grand Zeppelin will start on its sixth transatlantic trip. The United States, focal point of former air line crossings, will be neglected, for the R-100 will point for Canada and the Graf for South America.

Lighting Weeks Radio

Monkton, Sask.—The radio set was completely demolished and the house will set on fire when the home of Alfred Jones, here, was struck by lightning during a severe thunderstorm, accompanied by heavy rains.

Canadians at White House

Washington, D.C.—The British dignitary R-100 will attempt to bridge the Atlantic this spring, the first trip to the British dream of an air-linked empire. Meanwhile the Graf Zeppelin will start on its sixth transatlantic trip. The United States, focal point of former air line crossings, will be neglected, for the R-100 will point for Canada and the Graf for South America.

Hon. Vincent Massey, Canadian Minister to the United States, accompanied E. W. Beatty, chairman and president of the Canadian Pacific Railway, or visit to President Hoover recently. They are here seen leaving the White House in Washington.

ANGLO-CANADIAN COMEDIENNE

Beatrice Lillie, the vivacious Anglo-Canadian comedienne, is now in Hollywood preparing to make a talkie. She is the wife of Sir Robert Peel.

Britain Acts On Liquor Shipments

Will Introduce Bill To Safeguard Interests Of U.S.

London, Eng.—The House of Commons, by a vote of 215 to 142, gave a Liberal member leave to introduce a bill to entitle the board of trade to suspend or cancel the certificate of any master, mate or engineer engaged in the illegal importation of intoxicating liquor into United States territory.

After Isaac Foot, Liberal member from Cornwall, had spoken for ten minutes advocating the measure, Frederick A. Macintosh, Conservative member from Argyle, and a lawyer who sometimes acts professionally for the liquor trade, opposed the bill in a speech filled with humorous remarks.

Lady Astor, United States-born representative and ardent temperance advocate, interrupted Macintosh several times.

Night Editor Of Calgary Herald Dead

P. W. Stone Was Well Known Throughout Canada

Calgary.—Percy W. Stone, for more than ten years night editor of the "Calgary Herald" and known from coast to coast as a Canadian's veteran newspaperman, died April 15, following a heart attack. He was 54 years of age. Prior to becoming associated with "The Herald," Mr. Stone worked on "The Winnipeg Telegram" and later became editor of "The Bannockburn Mail," and managing editor of "The Craig and Canyon" in Banff.

Mr. Stone was an Englishman by birth, but came to Canada as a boy and taught school in Ontario before coming west.

Disgrace To Span Atlantic

London, Eng.—The British dignitary R-100 will attempt to bridge the Atlantic this spring, the first trip to the British dream of an air-linked empire. Meanwhile the Graf Zeppelin will start on its sixth transatlantic trip. The United States, focal point of former air line crossings, will be neglected, for the R-100 will point for Canada and the Graf for South America.

Lighting Weeks Radio

Monkton, Sask.—The radio set was completely demolished and the house will set on fire when the home of Alfred Jones, here, was struck by lightning during a severe thunderstorm, accompanied by heavy rains.

Canadians at White House

Washington, D.C.—The British dignitary R-100 will attempt to bridge the Atlantic this spring, the first trip to the British dream of an air-linked empire. Meanwhile the Graf Zeppelin will start on its sixth transatlantic trip. The United States, focal point of former air line crossings, will be neglected, for the R-100 will point for Canada and the Graf for South America.

Hon. Vincent Massey, Canadian Minister to the United States, accompanied E. W. Beatty, chairman and president of the Canadian Pacific Railway, or visit to President Hoover recently. They are here seen leaving the White House in Washington.

Establishes New Speed Record

Pilot Buchanan Makes Fast Flight From Winnipeg To Regina

Regina.—A flight from Winnipeg to Regina in two hours and 45 minutes, establishing a new speed record for that leg of the Western Canada air mail service, was made by Pilot W. J. Buchanan on April 13, in a P-14 machine.

He left Winnipeg at 9:05 p.m. (Winnipeg time), or 8:05 p.m. Regina time, and arrived here at 10:50 p.m. (Regina time).

There was a 25-mile an hour wind blowing from the southeast during most of the flight, but unfavorable weather made it necessary for him to "fly blind" from Brandon to Regina. The total distance is 330 miles.

Surveyed Air Mail Routes

Superintendent Of Airways Returns To Ottawa From West

Ottawa.—Making a two-day stop over flight from High River, Alberta, to the capital, Squadron Leader J. H. Tunstun, superintendent of airways for the civil aviation branch, has returned from a survey of air mail routes in western Canada. The return flight of approximately 2,208 miles was made in 17 hours and 50 minutes flying time. Five stops were made.

Major Tudhope's survey had as its purpose an investigation of possible routes for the final link in Western Canada of the trans-Canada Air Mail Service, to be completed in the near future.

Impressed With Bay Port

Development At Churchill Was Surprising To Premier Bracken

The Hon. Man.—Churchill will probably not be thrown open to the public this year is the opinion of Premier John Bracken, who has returned from his first visit to the northern seaport.

Mr. Bracken stated it would seem unwise to open it to the public as no provision had yet been made for public utilities other than those for the government men who will be employed there this year.

Premier Bracken stated he was impressed with the magnitude of the development at Churchill.

PROPORTIONAL REPRESENTATION VOTING SYSTEM

Ottawa, Ont.—Proportional representation, which now is occupying the attention of the administration and of the opposition members as well, is not a new subject in Ottawa. In the House of Commons a few days ago, Premier Mackenzie King, in his speech on the subject, gave the matter consideration and said the progress made during the session will determine whether or not a bill is introduced.

In 1921, a committee of the House investigated "P.R." The committee recommended taking a plebiscite because it was "not prepared to recommend the application in the next general election." The committee was impressed by the arguments presented by the advocates of the system and in its report said:

"It must be apparent that the present system of elections in single-member constituencies meets fully the purpose intended only when no more than two candidates are nominated. Recent experiences in elections in Canada have brought home to all people the fact that when three or more candidates present themselves in single-member constituencies, the candidate defeated is merely a minority of those voting in the constituency."

It was after the 1921 election that a debate and division took place on the report. W. C. Good, Progressive member for Brant in 1923, introduced a motion calling for the adoption of "P.R." in multi-member constituencies. Practically all the then leaders took part in the debate and in the division that followed, the motion was lost. Among those who voted for it were Premier Mackenzie King, Hon. W. S. Fielding, and Hon. Ernest Lapointe, Minister of Justice. Right Hon. Arthur Meighen, then leader of the Conservative party led the forces opposed to the motion although party lines were not followed rigidly in the division.

Hon. Lucien Lamontagne, solicitor-general and Hon. James Macdonald, Minister of Trade and Commerce, were two of the present cabinet ministers who voted in opposition to the motion.

WORK OF NAVAL PARLEY GIVEN IN WHITE PAPER

London, Eng.—Parliament has received a "white paper" which summarizes the achievements so far by the London naval conference.

Among other points Premier MacDonald outlined the tonnage reductions negotiated and the attendant saving in money. In conclusion the "white paper" says:

"Important as are these financial savings yet a more important result of this first stage of the London conference has been the elimination of competitive building in cruisers and auxiliary craft between the British Commonwealth, the United States and Japan, with all that implies in mutual improvement of their political relations."

"Figures on agreement between these powers have been placed at a low level, and it is the earnest hope of His Majesty's government that, should remain in London while the conference agreement may be reached with the French and Italian governments at levels which will permit their programs of tonnage figures being incorporated in the agreement already reached between the other powers."

"After signature of the treaty the conference will adjourn in order to give further time for negotiations between the French and Italian governments and Japan, with all that implies in the difficulties which as yet prevent complete agreement."

"These negotiations may be prolonged and it is necessary that delegations from distant countries, which are not so immediately concerned, should remain in London while the conversations are proceeding. It is for this reason that adjournment has been decided upon."

Will Not Seriously Affect Canadian Trade

Chancellor Of Exchequer Announces That Changes In British House

Ottawa.—Tariff experts of the Dominion Government are busily studying the tariff changes announced by Mr. Philip Snowden, Chancellor of the exchequer, in the British House of Commons. The British cabinet opinion expressed in that they will not seriously affect Canadian trade.

PROPORTIONAL REPRESENTATION VOTING SYSTEM

Ottawa, Ont.—Proportional representation, which now is occupying the attention of the administration and of the opposition members as well, is not a new subject in Ottawa. In the House of Commons a few days ago, Premier Mackenzie King, in his speech on the subject, gave the matter consideration and said the progress made during the session will determine whether or not a bill is introduced.

In 1921, a committee of the House investigated "P.R." The committee recommended taking a plebiscite because it was "not prepared to recommend the application in the next general election." The committee was impressed by the arguments presented by the advocates of the system and in its report said:

"It must be apparent that the present system of elections in single-member constituencies meets fully the purpose intended only when no more than two candidates are nominated. Recent experiences in elections in Canada have brought home to all people the fact that when three or more candidates present themselves in single-member constituencies, the candidate defeated is merely a minority of those voting in the constituency."

It was after the 1921 election that a debate and division took place on the report. W. C. Good, Progressive member for Brant in 1923, introduced a motion calling for the adoption of "P.R." in multi-member constituencies. Practically all the then leaders took part in the debate and in the division that followed, the motion was lost. Among those who voted for it were Premier Mackenzie King, Hon. W. S. Fielding, and Hon. Ernest Lapointe, Minister of Justice. Right Hon. Arthur Meighen, then leader of the Conservative party led the forces opposed to the motion although party lines were not followed rigidly in the division.

Hon. Lucien Lamontagne, solicitor-general and Hon. James Macdonald, Minister of Trade and Commerce, were two of the present cabinet ministers who voted in opposition to the motion.

Prince Flies From Khartoum To Cairo

Expects To Leave Africa Very Shortly For England

Khartoum, Egypt.—Prince of Wales and the party which was with him throughout his hunting in British East Africa, left here in six aeroplanes for Cairo. They will leave there for England shortly.

The Prince, before boarding the "plane," put on a woolly jacket and scarf over a khaki shirt and shorts, because of the chilly morning.

Hardly had his plane, with four escort planes dispatched in the north, when five other planes bearing other members of the party and baggage, departed.

Diocese Will Be Transferred

The Past Man.—Plans for establishment of a Roman Catholic diocese headquarters at Churchill, on Hudson Bay, were revealed here by its Rev. A. Turkel, O.M.I., Bishop of Churchill. The "Bishop of the Arctic" stated that no definite date had been set for transfer of the diocese headquarters from Chesterfield to Churchill.

Boys Killed In Fire

Lucata, Sicily.—Fifteen boys, ranging in ages between 15 and 18, were killed in a moviehouse fire and stampede. A general rush to the exits, following outbreak of fire in the film room, was the cause of the fatalities. In addition, three others were seriously injured and five were slightly hurt.

Exercise Needed To Keep Healthy

Moderation Necessary As In All Things, However

There is a saying which everybody has heard, because it is as old as the hills, that "all work and no play makes Jack a dull boy."

Somewhat has abbreviated this to "all work and no play makes Jack a dull boy." Both quotations have merit, but like most sayings of the kind, they are only partially true. A better rule in life for all of us to bear in mind is "be moderate in all things."

Being moderate applies particularly to the amount of exercise we should inject into our daily programme. It is a very serious matter and should be entered into with considerable thought. Too little exercise is conducive to a weakly constitution and too much exercise is apt to lead to serious consequences.

The object we should try to achieve is to find the health habits which are best suited to promoting good health and to stick to them.

Now and then you may be induced by some energetic person to indulge in some form of sport or exercise which is altogether too strenuous for you. It is well to have a physician look you over before entering into anything which might by some chance result in physical prostration.

The importance some form of exercise for everyone's muscle development, however, cannot be over-emphasized. The muscles of the body are made up of many strands, and these strands are made up of very fine fibres. The fibres are again divided up into separate parts or segments, and every one of these segments has its own blood and nerve supply. This is a very fine and delicate system, but we are absolutely dependent upon our muscles. Each muscle end is attached to the bones, and if they were torn, the whole framework would collapse and we wouldn't be able to stand up. And the muscles are so constructed that they must be exercised often because the more work they do the stronger they become. As an example of how this acts, if a man were to tie his arm to his side and not use it for some length of time he would find, when he released it, that he could not use it whether he wanted to or not. In other words, he would not have given his muscle system enough work, and as a result of this inactivity, the muscles forget how to function. The best exercise one can get is a rule in something one likes to do. Fortunately indeed is the man or woman who can play golf, or tennis, or swim, or play almost any kind of game and get real pleasure out of it. But if we are not in a position to take part in this sort of recreation, we are by no means dependent upon them. There are other forms of things we can do that are of a very simple nature, and yet very enjoyable, if we enter into them in the right spirit. One of these things is walking.

A great doctor once wrote that the best way to acquire a good complexion is to bury a post three miles from your house and then walk out there every day to see if anybody had moved it.

Walking is undoubtedly one of the best forms of exercise within the reach of any of us. It is an excellent plan to take a walk of a certain distance every day, and then to go about it in a business-like manner. In order to get the full benefit from it, we must carry ourselves properly. Few people know how to walk. They stroll. And there is a vast difference between the two forms of ambulation.

Here is the way to go it: Wear comfortable, loose clothing, and select a destination two miles away. Allow yourself half an hour to do the stretch and measure your steps so that you will arrive there promptly. Keep the shoulders back, head up, chin tilted, and swing the arms, just as they teach you in the army. Think of a regular pastime is a lot of it. If it is a nice day, and it will go a long way toward putting roses in the cheeks of the walker.

An opening three inches long and covered by a remarkable shade of tin working on a hinge at the top allowed the light to shine forth or not, at will.

Inside, holes were punched in diamond-shaped groups, for ventilation.

An automobile manufacturing plant has been started in Bombay, India.

The smaller the fish the more it strains the veracity of the angler.

"You strikers ought to work. A great man said work is the greatest joy of life."

"Yes, but I don't live just for my own pleasure."—Karl Marx, Oslo.

W. N. W. 1834

Cable Depreciates If Stored

Demand On Account Of Shortage Has Created Shortage

A world shortage on suitable deep sea cable is apparent, following the unkind demands attended by millions of cable destroyed by submarine earthquakes of November 18, according to C. Berner, cable engineer, in charge of the repair expedition aboard the "Dominion," world's largest cable laying ship, which recently returned to Halifax. The "Dominion" arrived from London after being more than two months at sea, and took aboard buoys and supplies before resuming her work.

Such is the demand for suitable cable that the supply tanks at Gibraltar have been drained, and the cable previously stored there is being brought to Halifax by the Norwegian freighter, "Ringen."

Operating in conjunction with the "Lord Kelvin," the "Dominion" under charter to the Western Union, repaired in 1910 New York-Bay Roberts cable damaged over a distance of 175 miles.

Large stores of cable are not kept on hand because they depreciate faster than when in use. Mr. Berner explained, Mr. Berner was in charge of the laying of the high speed cable from Bay Roberts to the Azores in 1908, which is the fastest deep sea cable in existence, capable of transmitting several thousand letters per minute. Specially designed, it was estimated that the cable must be 1,341,718 miles in length. The cable was laid as called for, even to the last inch, which is stated to be one of the most remarkable achievements in cable laying on record.

Absolutely no signs of foreign submergence on the ocean's bottom, nor any changes in soundings were reported by Mr. Berner.

Equipment Is Adequate

Nature Gives Every Creature Means To Protect Itself

It is curious to note the different ways in which Nature equips creatures in order that they may be able, to a certain extent, to avoid death. Any animal, even if it has never set eyes upon water before, can, upon being thrown into the water, instinctively swim. Even a cat, hating water as it does, at once strikes out and reaches the shore, no matter if it is but a few feet away.

In the same way Nature has equipped some of the creatures that exist in water with protection against various dangers.

A strange case is that of a minute insect that exists in ponds—the arcella—which was recently a subject of investigation by Dr. Rens of Carnegie University. It was discovered that this tiny insect is equipped with a means of saving its own life if by any chance it strays into too deep water for its comfort.

Immediately the arcella reaches water it has not enough oxygen to keep the insect alive. A strange change takes place—a tiny hole in the creature fills with a kind of gas, and the little insect is carried up to the surface, almost as if it were in a balloon! And so, in this way, this small creature, that would otherwise perish, is saved.

Life goes about in comparative safety.

Two folding wire handles were placed at the back, and on the inside a piece of oval tin with highly polished surface served to deflect the candle light.

An opening three inches long and covered by a remarkable shade of tin working on a hinge at the top allowed the light to shine forth or not, at will.

Inside, holes were punched in diamond-shaped groups, for ventilation.

An automobile manufacturing plant has been started in Bombay, India.

The smaller the fish the more it strains the veracity of the angler.

Our Oriental Problem

What Can Be Done With Canadian Born Japs and Chinese

Our Oriental problem is primarily one of exclusion, not of assimilation. It is becoming increasingly a problem of our own people, of Chinese and Japanese born in Canada, educated in Canadian public and high schools, and in everything but descent, more Canadian than Oriental. What are we going to do with these young people? There were practically five thousand of them in the schools of British Columbia last year. There are probably as many this year, or more. In Richmond, 600 out of 1,900 pupils are Japanese, and in two or three of the Vancouver schools there is quite a sprinkling of Japanese and Chinese—bright youngsters, eager, industrious, energetic.

It is suggested, from time to time by anti-Oriental organizations that the Orientals of British Columbia be bought out and sent back to the country from which they came.

But even if it were practicable, it would not solve the problem of the second generation of Chinese and Japanese. There didn't come from anywhere abroad; they were born here. In our schools we have imposed Canadian ideals upon them. All their associations and interests are here. In many cases they have no more relations with Japan or China than a second or third generation Canadian has with England or Scotland. To some extent, at least, they have adopted the Canadian standard of living. We have put these young people into our melting pot. We have done what we could to make them Canadian. Yet we refuse to accept them as Canadians. What are we going to do about them? One of these days they will be growing up and will want to know.

Placing the Blame

Modern Drug Store Evolved From Postage Stamp, Says Doctor

The drug store of the old days was a place where you could buy drugs and little else. Today it is a place where you can buy anything from sewing machine to phonograph records. How did it happen?

At first, the pharmacist, writing in the American Druggist, believes that the humble postage stamp is to blame.

The public had a way of wanting postage stamps at very odd hours; and it began to discover that the drug store was apt to be the only place open. The druggist was forced to carry drugs. This got both druggist and customer used to looking at the drug store as a convenient place for emergency purchases; and the druggist gradually began to stock up with other things that people might want.

Out of it grew the drug store of today, an institution whose usefulness is measured by the fact that it sells fewer drugs than useful things that people need more.—Vancouver Sun.

Average Value Of Farm Lands

The average value of farm lands as a whole in Canada, improved and unimproved, including the value of the land for the year 1929 is being \$37 an acre, in a report issued by the Canadian Bureau of Statistics.

To Save Eyesight

Ten Classes For Children Already Established In Canada

Preventive work in matter of saving eyesight of Canada's people has recently taken another step forward. New Brunswick is now carrying on a survey of the eyesight conditions of the school children of that province preparatory to organizing, if need appears, saving classes in certain schools. Miss Mary McLellan, M.A. (Oxon), who has recently returned from a lecture tour in the Maritime provinces in connection with the preventive work of the Canadian National Institute for the Blind, outlined the enthusiasm by which the work is being received by medical and educational authorities.

New Brunswick has the distinction of having monthly health examination of all school children, not only in the cities but throughout the province. Miss McLellan pointed out.

It is estimated that in every 100 school children in Canada have defective sight, usually less than one-third normal. Already there are 100 classes in operation in Canada, four of which are in Toronto, one in Vancouver, two in Winnipeg, one in London, one in Hamilton, and one in Halifax. The success of the Toronto classes has demonstrated that children who would otherwise lose confidence by inability to keep up with other pupils regain their morale, while their sight is not further impaired by unsuitable study.

Due To Advertising

Orange Growers' Consistent Campaign Has Proved Worth While

It is not particularly gratifying to Canadians to be told so often, on good authority, that more oranges are eaten in Canada than apples. It is not particularly gratifying to the orange growers of California. The astonishing statement is made in the annual report of E. G. Desell, the general manager of the California Fruit Growers' Exchange, that by spending \$1,680,000 in the advertising and merchandising of Sunlight brand, the growers have obtained \$118,875,102 for a crop of oranges, lemons and grapefruit, so large that it would have brought distress to the growers a few years ago. The demand was created by advertising, and then good salesmanship did the rest.—Stratford Examiner.

World Label Butter

Regulations requiring packages containing butter to be marked with the name of the country in which the butter was made are being considered by the Dominion Government. Hon. Charles Stewart, acting minister of agriculture, so informed the House of Commons in reply to a question from H. B. Ashford (Labor, Calgary East).

British Drink Most Tea

The British breakfast table accounts for the great bulk of the world's tea consumption; last year's importation figures show that, aside from tea-drinking in the countries of production, Great Britain alone consumed 62 per cent. of the world's supplies, and the British Empire as a whole 70 per cent.

Where the Horse Is Missed

Millions Have Disappeared From U.S. City Streets In Estimate

The recent (United States) government figures showing a disappearance from farms of 714,000 horses, and mules during the past year illustrate a long-time trend, which undoubtedly has had an important bearing on the surplus crop problem and low price of the past decade. Back in 1910 the work stock carried on farms amounted to 26,436,000 horses and mules. The January, 1930, estimate places the number at 18,762,000. This disappearance of 7,674,000 head of work stock from farms has been accompanied by a valuation decrease of approximately one and a half billion dollars.

There are no accurate figures concerning the disappearance of horses and mules from cities and towns during this period, but that the reduction has been far more sweeping and rapid than in rural districts should be apparent to anyone who recalls conditions a decade ago. Some estimators have placed this loss at work stock from city streets during the past ten years at two and a half million head, thus pushing up the grand total disappearance of horses and mules during the past decade to the ten-million head mark. Ten million head of work stock would constitute 10 per cent. of twenty million tons of hay and approximately three-quarters of a billion bushels of grain. Agriculture has therefore lost—and the oil industry has captured—a market demand which, were it now available, would undoubtedly send farm prices soaring.—The Courier-Examiner.

From a Different Angle

Fruit When Reasoned By Weight Is Not So Expensive

Very often the housewife will get a better idea of the actual cost of a certain food, by figuring it in some other form. For instance, oranges at sixty cents a dozen may seem very high, but work out a dozen and find they are costing about fifteen cents a pound, they appear very low priced indeed—particularly when you consider that you are paying several times this much per pound for such foods as butter, steak and cheese.

An most of us eat too much of the acid-producing foods like meat, fish, bread and eggs, and not enough of the alkaline foods like oranges, apples, lemons, carrots, celery and spinach; it is well to know this little trick of figuring price. The money saved by getting four pounds of steak instead of six will go a long way toward taking care of fruit soup, salads and light desserts for a day, and a little careful figuring will enable any woman to set a more evenly-balanced table than she does, at even less than she is spending for food today.

The Phone System For Ships

A telephone system, which in addition to the usual inter-communication system found on ships for use of the personnel, comes with the installation of the three new steamships, "The Prince Henry," "The Prince of Wales" and "The Prince of Wales," are being placed in service on the Pacific coast by the Canadian National Steamships.

To most of us Easy Street seems to be marked "No Throughfare."

New Art Of Diamond Cutting

Work Has Been Speeded Up By Ingenious Mechanism

For centuries the art of the diamond cutter was considered a special talent which must be developed by years of training. Today, diamonds are cut by the aid of ingenious mechanism which has greatly speeded up the work, while producing the most brilliant gems in history. The machinery which is revolutionizing the ancient art is for the most part the creation of American ingenuity.

It no longer requires a diamond to cut a diamond. Formerly there was no way of dividing a diamond except by splitting it along the line of cleavage. Diamonds are now sawed into pieces at any desired angle. The hardest of stones are now saved in means of a very thin disk of phosphor-bronze, revolving at a very high speed. It takes a day to cut through a single crystal of diamond, whereas a dozen such saws, it is very delicate work, for a stone may be shattered and ruined if the saw strikes a flaw in the stone. The work is anticipated by listening intently to the humming note of the saw, which permits the cutter to avoid danger when a flaw is approached.

Diamonds are now reduced in size by turning them in a lathe like any other material. The diamond is turning is tipped with a diamond. In this way skillful workmen can reduce the size of stones quickly and accurately, saving the slow and laborious work of splitting and polishing followed in the past. Incidentally, the by-product of this work is the form of diamond chips and dust is very carefully collected.

One of the most important labor-saving devices used in diamond cutting is the mechanism which determines the angles of the facets of the gem. The diamond cutters of the past cut the facets by slowly rubbing two diamonds together. Later the work was done by holding the stone against a rapidly revolving disk. The angle of the facet was determined by the judgment of the diamond cutter who became expert from long experience. The new tool is equipped with a dial which makes it possible to cut the facet with scientific accuracy. The diamonds cut by the new methods reveal all the latest beauties of the stone and are, doubtless, the most beautiful ever cut in the long history of the art.

From the Inside

People In Broadcasting Stations See Strange Things

Karl K. Kitchen, writing in New York Sun, says "A friend of mine was being shown through one of the larger broadcasting studios. As he watched an operator preparing for its program he stood with his back to one of the announcer's desks, and at the same time overheard him telling his audience:

"... when the gong strikes it will be exactly 5 o'clock Eastern Standard time... this current time comes to you through the C. C. McNeill, has been secured by the Blush Clock Company."

My friend turned to see the announcer as he struck the gong, and he almost swallowed his tongue when he saw that the timepiece from which that passage was waiting to gauge the gong strike was one of the well-known dollar variety."

A Typographical Error

In an announcement of the revival at the Church of the Brethren, made in the Kansas Herald, the linotype spoiled a perfectly good compliment by misprinting one letter. The sentence should have read: "He believes in a happy religion and lives it!" But the linotype made it, "He believes sin a happy religion and lives it!" Can an apology ever fix it?

Housewives of New Zealand are using American vacuum cleaners.

A single palm tree has produced as many as 4,000 dates.

"You don't recognize me? What about the debt you owe me?"

"No—don't recognize the debt either."—Huen Huen, Madrid.

VISIT CANADIAN UNIVERSITIES

A greater mutual understanding of educational facilities in Great Britain and Canada will result from the visit to this country of 16 headmasters of English Public Schools. They crossed the Atlantic on the Canadian Pacific liner "Duchess of Bedford" and will visit the leading Canadian Universities. The picture shows them on board the ship on arrival. They are from left to right, sitting: W. H. Fyfe, M.A., Christ's Hospital; F. B. Malin, M.A., Wellington; Dr. C. Norwood, Harrow; F. Fletcher, M.A., Charterhouse; J. Talbot, T.D., M.A., Halesbury; J. Lindley, M.A., Oundle; M. O. Onslow, M.A., Eton; M. H. B. Gurner, M.C., M.A., Whitgift Grammar School; G. C. Turner, M.C., M.A., Marlborough; Rev. V. P. Nevill, O.B.E., M.A., Ampleforth; G. W. Olive, M.A., Dauntsey; M. J. G. Jones, M.A., Mill Hill; G. Robertson, M.A., George Watson's College, Edinburgh, representing Scottish Schools; L. Crake Hooper, M.A., Bedford; W. M. Gordon, Wrexham College, Bala; D. L. Miller, Manchester Grammar School.

Recreational Resources of Canada Compose a Loadstone Which Draws Millions Of Visitors

Canada's recreational resources are a national asset of the first order. They compose the loadstone which each year draws millions of visitors to the Dominion and they form a source of wealth which annually adds a large and growing item to the national income. There are, in fact, few records in the annals of Canadian development more interesting or more remarkable than that of the rise to importance of the Dominion's recreational features. Today the returns from these sources keep pace with those from such major factors as mines and forests.

Some idea of the extraordinary growth of holiday traffic may be gained from the records of touring automobiles entering Canada in recent years. In 1928 the number of cars entering Canada for touring purposes was 238,000 and during the ten years up to 1929 this figure had increased to 4,000,000. Added to the phenomenal increase of motor tourists, railway and steamship lines each year add large numbers to the holiday crowds who holiday in Canada. Tapping an even wider field than the automobile, these organizations have spread the Dominion's fame as a holiday land literally through the world.

The most casual traveller crossing the Dominion from coast to west end will not be struck by the sheer diversity of Canada's natural features. There is the ruggedness of the shore; then the great system of inland lakes, seas in depth and size; next a thousand miles of rolling prairie followed by the great barrier of the Rockies, rivaling the Alps in grandeur; and finally the sea, bathing its warm waters in the Gulf of St. Lawrence. All these contribute to the glorious panorama of a transcontinental trip across Canadian territory.

The charm of the Maritime Provinces is not easily depicted. These provinces—Nova Scotia, New Brunswick and Prince Edward Island, and New Brunswick—are famed for the mellowness of a life that captivates the visitor from new regions. The moorish lighthouses crowning the cliffs that overlook the sea, the white sail of the fishing smack seeking the shelter of the quay, the quaint fishermen's cottages that straggle up the hillside, the shaded roads and winding paths, the streams, the springtime mantle of blossom that clothes miles upon miles of orchard valleys, all these suggest the elements that blend to give the Maritimes a picturesque peculiarity of their own. In this setting is found all that goes to complete the happiness of the holiday visitor—excellent facilities for motoring, boating, fishing, hunting in season, and all outdoor recreation.

Reaching from the Gulf of St. Lawrence to the head of Lake Superior, a voyage of 2,000 miles, one of the world's great systems of interior waterways traverses the Dominion. Canada, nowhere else in the world, has a route more varied than that traversed in a trip up the storied St. Lawrence. Touching at historic Quebec and busy Montreal. Leading on through the Thousand Islands and the Great Lakes, past Toronto, Niagara Falls and a dozen other centres of commercial or scenic interest, such a voyage reveals the heart of Eastern Canada and leaves a vivid impression not only of the natural beauty but of the business life of this part of the Dominion.

The Laurentian region—the huge horseshoe skirting Hudson Bay to the east, south, and west—is pre-eminently the country of forests and streams, of hunting, fishing, and canoeing, of great unexplored areas. Countless lakes and rivers form a network of countless highways leading the canoeist through a hinterland where trout, bass and muskies, moose, deer and bear, seek a superb field for the sportsman.

The prairies are less familiar as a holiday region. Yet, for thousands of

visitors, the fertile western plains with their endless miles of rippling grain present a scene of beauty and satisfaction to countless visitors. Beautiful summer resorts nestle on the shores of prairie lakes, and for the enjoyment of the sportsman few fields offer finer attraction than the hunting, in season, of prairie game birds.

For scenic splendour the Rocky Mountains have been declared by many experienced Alpine climbers to be unsurpassed. Majestic ranges, scarred by age and weather, rear their summits against sky of pure blue or bury their snow-capped peaks in fleecy clouds. Glaciers and waterfalls, emerald tinted lakes and wooded valleys combine to entrance the eye and the enchantment is increased by the alpine air fragrant with the scent of pine and fir. The mountains are noted for their big game—brown sheep, grizzly bear, Rocky Mountain goat, elk, deer, moose, caribou, black and brown bear, and mountain lion.

Canada's Pacific coast, with its forests and inlets, is a revelation to the eye and the imagination. It makes it an all-the-year-round playground for thousands, while its hunting, fishing, and other sporting attractions are unsurpassed on this continent.

Taking into account the scope, the variety and the steadily widening renown of the Dominion's recreational attractions, there is ample ground for the belief that the natural assets will through their direct and indirect commercial effects, prove to be one of the major forces of Canadian development in the next generation.

Winnipeg Newspaper Union

(By Annabelle Worthington)

Smart young things are including many silk crepe frocks in their spring wardrobe to be worn with separate coat to carry out ensemble theme.

The youthful animation of hem, and the sleeves of the yoked bodice are outstandingly chic in this model.

It is tipped in at normal waistline by new belt.

Style No. 2846 comes in sizes 14, 16, 18 and 20 years. In the 16-year size, 2 1/2 yards of 38-inch material with 1/2 yard of 39-inch contrasting material.

Pattern price 25 cents. Be sure to get size of pattern. Address Pattern Department.

Grain Elevator For Churchill

2,500,000 Bushel Grain Elevator To Be Completed By September 1931

Tenders for a 2,500,000 bushel grain elevator at Port Churchill, the terminus of the Hudson Bay Railway, have been asked by the Department of Railways and Canals.

It is planned by the department to have this elevator completed by September 13, 1931, in time for the handling of next year's crop. As from 600 to 800 feet of deep water dock will have been constructed by that time, it will be possible to load ocean ships at the elevator.

It is planned to resume the regular weekly, if not twice-weekly train service between The Pas and Churchill, for the use of Canadian National Railway officials and those at work at the Bay terminus. As there is yet no provision for people other than those actually employed at Churchill, outsiders will at least be discouraged from going there.

Deadly Carbon Monoxide

Risky To Run Car In Garage Even With Doors Open

In view of the deaths which are being so constantly reported through the deadly carbon monoxide gas, it is worth while to draw attention to the warning just given by Professor Norman Hall, of Manitoba University. The figures he gives as to the danger of this gas are startling. He finds that a mixture of five parts of it to 100 of air is very dangerous, but that one of 15 to 20 is absolutely deadly. The percentage which will be formed in a small garage in a few minutes is greater than this. One particular point is urged by the professor, that it is not safe to run the engine in a garage for any length of time with the doors open, for if the wind should happen to be blowing into it this would be tantamount to closing the doors.

Merchant Has No Comeback

Partridge Breaks Flat Glass Pane In Store Window

When a storekeeper has plate glass windows broken they usually look for the price of a new one, and quite frequently get it. But in the case of A. J. Lawrence, Dunlop Bank merchant, who had a large plate glass window broken the culprit gave him life for his rash act. Possibly the merchant was not even then satisfied. The culprit was a partridge, which smashed the glass all to pieces when it flew against the window. Its neck was broken by the impact.

For Improved Livestock

The first "Improved Site Area" in Manitoba has been established in the municipality of Roland, according to an announcement made by Albert Prefontaine, Minister of Agriculture. Under the Improved Site Area Act, all bulls, boars and rams must be inspected and approved before the owners of same are permitted to retain them for service in the area.

Monkeys trained to operate them are used to try out new types of parachutes in Japan.

Strange Blue Grass

Thrives In Winter

Will Grow Under Adverse Conditions Without Cultivation

Experts from the United States Department of Agriculture predict that the strange winter blue grass discovered on an Oregon farm and believed by them to be the "lost grass" of Europe, may revolutionize farming and dairying industries.

The story of the grass is a farm romance. Similar to grass which disappeared in Europe a century or more ago, it died down. In summer, when other grass is green, but thrives in winter, when food for livestock is low. It forms a perfect turf, even under the snow.

Because the experts found it will grow under adverse conditions, without cultivation, and will thrive in rainy regions, they view it as a solution of the problem of utilizing low-lying lands of the Pacific northwest.

Seeds for use in the Pacific northwest will be sold exclusively in Seattle by the Children's Orthopedic hospital. The discovery was a gift of Mrs. E. B. Haney, on whose farm the seed was found, and will be a source of permanent income for the hospital.

Yellow Journals In Shanghai

People Have To Be Circumspect To Avoid Publicity

The Chinese business or production of the man who strays from the straight and narrow path usually leads all about his sins in the papers.

A survey made recently by military authorities indicates that there are more scandal sheets in Shanghai than in any other city in the eastern hemisphere and probably in the world. One hundred and ten yellow tri-weekly newspapers are published in the Asiatic metropolis and all are devoted to printing news not fit to print.

To keep these pages supplied with information concerning the doings of Chinese who are in the spotlight, a large army of Chinese scandal mongers is constantly kept on the job. They appear at the most amazing times and at the most inconvenient places.

Special Type Of Piano

German Manufacturer Solves Problem Of Difficult Traveler

In order to transport pianos over mountain trails or difficult roads, an enterprising German manufacturer has constructed a special type of the instrument which permits it to be carried on horseback. The piano has a U-shaped lower section which fits into the saddle of the horse. Other piano manufacturers are doubtful as to what they can be transported in several packing cases on the backs of mules, and assembled on delivery, because the instrument would be ruined were it to be hauled over many of the trails for hours, and often days, in a cart drawn by oxen.

An average of 3,000,000 persons are ill in the United States every day.

SUGARING TIME

You can't fool these two youngsters about this spring business. When there is a sound of preparations in the maple bush, the fragrant scent of burning hard wood and glint of sap pails it's a sure sign that spring is here. Here we see "Jack" and "Jill" who didn't need to go up the hill, and furthermore, it isn't water.

The Present Market Condition Clearly Reflects Success Of Pool Says Professor Fay, of Toronto

Control Wolf Menace

Bounty Offered For Destruction Of Wolves In The North West Territories

The Department of the Interior, through its North West Territories and Yukon Branch, wages a continuous fight to control the ravages of wolves among the wild life of Northern Canada. Realizing the tremendous toll taken annually by wolves, principally among the caribou, and the serious destruction caused along trap lines by the mutilation of the pelts of fur bearers caught in the traps, the Department has for a number of years been experimenting with various methods of control.

The most effective scheme to date has been the increased bounty of \$30 per wolf pelt put into effect in 1924. Under the regulations the hunter or trapper turns in the wolf pelt and receives the bounty, the pelt becoming the property of the Department. In this the wolf is being made to pay for his own destruction as the money received from the sale of the pelt at the fur auction has greatly reduced the cost of the increased bounty system. Owing to the high prices paid for the fur trade for choice wolf pelts, not all of the pelts are turned in for the bounty, but the bounty on which bounty has been paid and which have been forwarded to Ottawa during the fiscal year ended April 1, 1930, shows that 258 wolves were killed in the last twelve months as compared with 1,940 in the same period last year.

Japan Takes More Wheat

Half Of 1929 Import Was Purchased From Canada

Not only did Canadian-Japanese trade reach a new record in 1929, but Canada supplied Japan with one-half the wheat imported by that country. This is shown in statistics prepared by the Department of Finance, Tokyo, and announced in a statement from the Japanese consul at Vancouver. The statement further remarks: "While the import of wheat from Canada has increased year after year, import of wheat from the United States is decreasing in proportion. In 1927 Canada's share was one-third of the total imported into Japan, while in 1929 it increased to one-half of the total, followed by Australia and the United States."

The value of Canada's wheat exports to Japan was more than \$17,500,000, an increase of more than \$1,750,000.

Canada's total exports to Japan amounted to nearly \$34,500,000, an increase of \$1,125,000 over the preceding year. Japan's exports to Canada remained stationary at \$13,500,000.

In 1929 Japan's import of pulp showed a decrease, but Canada continued to lead in that market with \$22,259,999 worth, followed by Norway and the United States.

The Time To Advertise

Greatest Need Is When Things Are Looking Bad

There is a curious idea which dominates the minds of some people that the time for advertising a particular product is when the market price is good as the result of a strong demand, and that it is futile to advertise when prices are low. The fact is that there is no particular reason for advertising, and, for the best results the product in question must be kept before the public eye at all times and all seasons. When the market is good, advertising can help to keep up the demand; when it is bad it can assist in creating a better demand. Indeed, it is when things are looking bad that there is the greatest need for advertising.

Has Sunless Winter

Like Hammefer in Norway, Prussia has a village upon which the sun never shines during the winter.

The name of the community is Furlingwasser, and it is located in the Giant Mountains. Two mountain shelter the village from the winter sun the whole day long, so that the village has nothing but twilight at which to do its work from sunup to sunset.

Heart disease, cancer and accidents claimed more victims in 1929 than in former years.

A pineapple taken to London ahead of season by a sailor was sold for \$25.

The easier a girl is to look upon the harder a man will look.

The Canadian people have confidence in the Wheat Pool and the present condition of the market clearly reflects the success of the Pool, says Professor C. R. Fay, of the economics department of Toronto. Prof. Fay, who has just completed a survey of the wheat grain situation and will shortly proceed to England to examine the status of the Canadian Wheat Pool there.

"After my investigation I am a strong supporter of the Pool as it has functioned hitherto as a voluntary organization," he said. "There has been an attempt made in Saskatchewan to make it compulsory for farmers to sell their wheat through the Pool. I am strenuously opposed to that."

The fact that export trade was improving was another indication of improvement in the wheat situation, said Prof. Fay. Canada's wheat trade was fixed on the American winter wheat crop. However, absence in there are any moderate improvement of exports have caused farmers to cease to worry on that score.

Talking over the general situation last year with both representatives of the wheat "trade" and the Pool, Prof. Fay said that the Canadian North America had most "bullish" in its wheat trading.

"Most emphatically the Pool was not holding out when the trade was selling," he said. "The Pool was offering wheat continuously all summer long. It was a case of Winnipeg prices in an effort to dispose of the wheat crop."

But in order to compete with the unusual Argentine crop, it would have been necessary to sacrifice grain as low as 20 cents below the Winnipeg price, which was unworkable," he continued.

"The difficulty in 1929 was to move the wheat imported by that country. Canadian wheat to Europe, which was determined to depend on its own wheat crop. There is no question of a boycott of Canadian wheat," said Professor Fay. "The tariff wall in England and Europe is just a case of tariff protection for local growers against the cheaper Argentine wheat. The ban was not directed at Canadian wheat, but higher grade grain has suffered, with the lower grade Argentine product."

"I wish to defend the Pool as a strong, stable organization, whose members are standing fully behind it. Even though many of the western farmers are so short of money that they have had to sell their seed grain in order to live, they are supporting their Pool," he said. "The division in Saskatchewan has died down and it is now less acute than in the period of low prices."

Queer Sight In Cuba

Trees Grow In Limestone Areas With Little Care

Huge trees growing without any visible means of support are one of the queer sights to be seen in the swamp of Southern Cuba, which is nearly 1,800 square miles in extent. Many varieties of trees some 4 feet in diameter, are found growing in limestone areas where not so much as a single spoonful of soil can be gathered from an acre. The trees make a sort in small pockets and holes in the limestone, where collections of leaves and disintegrated rock furnish them with cover for growth. In their search for food the roots stray about over the surface of the rock, finally plunging through holes to find sustenance in soil hidden deeply in the cavernous recesses of the coral stone.

Nearly 5,000,000 persons with incomes of more than \$670 a year were assessed for income tax in England in the last fiscal year.

"Do you worry about your old debts?"

"No, I forgot old debts."

"What about new ones?"

"I let them get old," Hummel, Hamburg.

"Why do you insist on a post-mortem examination after you are dead?"

"I want to know what I die of," Musket, Vienna.

Red Rose Orange Pekoe Tea is truly economical. A half pound makes almost as many cups as a full pound of cheap tea costing 50c to 60c.

CHAPTER IX.—Continued.

"Not one cent under a dollar seventy-five, Edgar Purdie, and then I'm giving them away. But you needn't feel at all obliged to take them. That Darling girl will most certainly give them to you."

"I don't know a bargain when I see one, my dear. You better get rid of 'em quick. I'll give 'em to you. You've got to go back home for whatever it is you're giving."

"Whoever said I was going to South Wickfield?" burst from the embarrassed deacon. He was almost ready to give up. "Look here, Grandma Davis, don't you put those beads away. This is a sort of an emergency. Will you take one fifty, just for the sake of old hand?" said Wickfield, and you've got to go back home for whatever it is you're giving."

"Well," sighed Grandma, "seeing that you're an old friend, Edgar, and as you said, this is a—particular occasion, I'll let you have 'em. But you'll have to pay me cash. Giving 'em away like this—"

"Oh, I'll pay cash!" broke in the deacon eagerly. He pulled out a wallet, deposited the amount in Grandma's hand and put the covered possession into his pocket, buttoning his coat above it for extra safety. "Good, by, Grandma. Seems to me you've done a real hard bargain, but there's times when it pays to spurge a little. You sure these beads are stylish," he added, pausing, and at the old lady's vigorous affirmative he closed the door.

It was as well, perhaps, that he did not stay longer, for no sooner was he safely off than Grandma and this deacon burst from their retreat in the next room.

"Your granddaughter seems to be in a state verging on collapse," announced John Carter. "I had hard work to restrain her from spilling that shrewd transaction that you have just terminated so successfully. Believe me, Grandma Davis, you would have shone as a horse trader!"

The old lady chuckled, and commented as Grandma made limply the to the chair recently occupied by her victim.

"I am sure when I've had such a good time I wish now that I'd asked more, and made him come up on his 'off and back and painful. When I remember—"

"But, Grandma," interrupted Charman sternly, though the corners of her mouth twitched upward, "you said you'd ask a dollar, and you asked two!"

"I said I'd make him pay a dollar," corrected Grandma. "Do you suppose, child, if I'd said a dollar in the first place that he'd have given it? You don't know Edgar Purdie like I do. That's why I asked for cash."

Lucia refused him this afternoon when he had those beads back on her, and she knows that she's not Davis. You can't tell me any more."

"If you cannot nurse him turn to Eagle Brand, the leading infant food since 1857."

EAGLE BRAND CONDENSED MILK

W. N. U. 1234

"Up to a certain age, I suppose they were," he replied thoughtfully, "and yet, the possession of this rug, for instance, is not without a twinge of heartache. It means—my having it at all—that I no longer have my parents—"

"That it is wonderful to have those memories," she said, laying an impulsive hand on his.

He squeezed her hand, and responded cheerfully: "Of course it is. But the first glimpse of that old rug brought everything back, and gave me a ally lump in the throat for just a minute. Really! It looks corking, doesn't it? And it was like Sis to send the candlesticks. Does the place suit you, Missus Charman?"

"But it suits you?" laughed the girl as it suits you?" laughed the girl as it suits you?"

"You know without the asking," she replied, "and thanks to your feminine touch, even the waiting room looks lovely."

"Those thanks are really due to the wicker chairs you sent for," she protested. "Yes, I'm sure, room."

"I looks—Why, here's the doctor!" he broke off suddenly. "Come in, Doctor Howe, and pass judgment on the finished product of my labor."

The old man stepped inside, looking about with shrewd, appraising eyes.

"Not much like my first office," he commented. "I was a room over the old drug store, but as basins in summer, and propolis, and so on, the snow fell. You're a lucky man, John Carter, with a place like this, and Charman Davis to look after you!"

"I realize that," responded the young M.D., with a glance at Charman, who was standing over at the window.

"At least, I shall have a pleasant place to cool my heels in while waiting for the trusting public to employ me. Do you want my company this morning, sir?"

"That's why I stopped. I need your young enthusiasm to throw light on a case that's been bothering me for weeks. Want to go with us, Charman?" It was a beautiful morning for a ride.

The girl looked longingly through the open doorway, but answered: "I couldn't, really. I've a thousand and one things to do this morning."

"What time shall we be back? If a patient appears in your waiting room, Doctor, I'll keep him here if I have to sit on him!"

"We'll be back at noontime," chuckled the old doctor; and as they started John Carter turned to wave farewell to the girl who stood in the doorway of his new office.

Charman waited until the shabby car vanished down the elm-shaded street, then turned back to the room behind her, looking down at the Oriental rug with eyes that drank thirstily of its beauty.

(To Be Continued)

Strangled With Asthma is the only expression that seems to convey what is endured from an attack of Dr. J. K. Kellogg's Asthma Remedy.

Where all was suffering from this comes comfort and relief. Breathing becomes normal and the bronchial tubes are cleared. This unequalled remedy is worth many times its price to all who use it.

New Land Map
The Department of the Interior has issued a new edition of a land map which shows at a glance the number of quarter sections of Crown land still available in each township.

The map also indicates Dominion Land Offices, existing railway facilities in each district and provides the customary information regarding cities, towns and villages.

Hibernation is as common among spiders as among bears.

Young Wife Strengthened
After Taking Lydia E. Pinkham's Vegetable Compound

Barnett, Ontario—"When I first took Lydia E. Pinkham's Vegetable Compound, I was in poor health. I had been married a year and my strength was leaving me. I was in a state of nervous prostration. I was a girl when I was first married. I was a girl when I was first married. I was a girl when I was first married."

Canadian War Memorial Pictures in Fire Proof Room at Ottawa

When construction of a new national gallery building is undertaken, provision will be made for the proper housing and display of the Canadian war memorial pictures.

The pictures, said Mr. Elliott, K.C., Minister of Public Works, in the House of Commons to a question raised by Col. Thomas Cranley, the Canadian national war memorial pictures, except those which now adorn the walls of the Senate chamber, are stored in a fire-proof storage room, specially prepared under the supervision of the National Gallery officials, in the Auditorium Building in Ottawa.

The pictures, said Mr. Elliott's answer, are completely protected from any damage due to dampness or any other unfavorable atmospheric conditions. They are not, at present on view, but can be examined by special arrangement.

Future Of Television

Great Possibilities Are Foreseen By Earl Of Clarendon

The Earl of Clarendon, former chairman of the British Broadcasting Corporation, foresees "staggering possibilities" for television.

He says: "When it is possible to present a stage play or a national event such as the Derby on a small screen which a family or perhaps a small audience in a hall can see, then television will go like wildfire."

He has some distance to travel before that goal can be achieved enough progress has been made to suggest that it may be attained within the next few years.

He has some distance to travel before that goal can be achieved enough progress has been made to suggest that it may be attained within the next few years.

Two-Way Television

Speakers See Each Other Through Device On Telephone

The curtain veiling the telephone of the future was jerked aside in the first practical demonstration of a two-way television by the American Telephone and Telegraph Company.

Users of the device, described as the "Incomophone," looked each other directly in the eye as they conversed, two and one-half miles apart.

Little Helps For This Week

"God is our refuge and strength, a very present help in trouble."

Psalm xiv. 1.

Consolate yourself with His word of grace, and cease thy wall of woe; For His mercy never an equal hath, And His love bounds can know.

How many like thee have found in Him a shelter and home of peace, By His mercy compassed round!

—John Greenleaf Whittier.

Where but in These have we a covert from storm, or shadow from the heat of life? In our manifold temptations Thou alone knowest, and ever night, in sorrow Thy pity revives the fainting soul, in our prosperity and ease it is Thy Spirit only that can ease us from distress, and keep us low—James Manteau.

Minard's Will Stop That Toothache.

Will Be Paying Cunt

Graf Zappella To Pay For Use Of Lakehurst Naval Base

The Graf Zappella hereafter will be a paying guest when it visits the United States. During its forthcoming stay the German ship will be quartered at a rate of \$2,000 a day in the big "hotel" at Lakehurst, N.J., naval base.

Other items on the bill include: \$3,000 for preparing the base, \$1,000 a day for keeping the base in readiness, dating from the hour of the expected arrival, and \$50,000 insurance. A deposit of \$15,000 covering all charges, will be exacted. It will be the first time the government has ever levied a bill against any foreign aircraft for accommodation at a U.S. naval base.

Minister, Run-Down In Health, Gains 7 lbs. in 3 Weeks

Rev. W. H. Taylor writes: "After a 7 weeks' revival campaign I was entirely run-down and losing flesh rapidly. I decided to give Ironized Yeast 3 weeks' trial. After 2 weeks I found my strength returning and the tired feeling gone. In 3 weeks I had gained 7 lbs. and was myself again."

"To gain just 3 weeks to change from a 'skinny' tired person to a strong well-filled-out man or woman. Tired feeling disappears. Blood-circulation improves. Health returns. No harmful drugs."

Only when yeast is Ironized is more effective—Iron in yeast is needed to bring out the best of the yeast, and strengthening values of Yeast. Pleasant-tasting tablets. Safe for everybody. Never cause gas or bloating, no harmful drugs."

Go to any drugstore today and get a full size treatment of Ironized Yeast. If after this generous trial you are not delighted, your money back instantly from manufacturer.
